

2008 PTC Technology Day

Saturday, October 4th, 9am – 4pm
PTC Offices, North Park Corporate Center,
1210 West County Road E, Arden Hills, MN

Free! Food! Fun! Giveaways!

*Use PTC products to manage
the development of your next robot!*

Pro/E – Hands-on tutorials on part design, assembly design and making drawings with our world class software - Pro/ENGINEER. This will be aimed at the mechanical designers and functional aspects of the robot.

Advanced Pro/E - See a demonstration from a PTC Product expert on Pro/ENGINEER. It'll cover simulation with FEA and mechanism functionality. Learn how to build a robot and verify its function in software before making a physical prototype.

Windchill Project Management - Project management is also a part of the design process. Students will get a chance to use our enterprise software project management software to help manage data, timelines and processes.

Mathcad - We'll let students/mentors/all work with our Mathcad product for natural math notation documentation of designs. This will give students a background for them to be able to use Mathcad for the number crunching work and documenting designs.

Space is limited! Register now at:
